ABOUT ME

I am a UX designer interested in how AI and data visualisation can make user behaviour easier to understand and act on. I like designing experiences that turn patterns into visuals, motion, summaries, or nudges, so insights feel simple enough to notice, useful enough to revisit, and practical enough for everyday choices.

SKILLS

- Systems Design
- AI Experience Design
- Interaction Design
- Data Visualisation
- Visual Design
- Interactive Prototyping
- Design Systems
- Motion Graphics Design
- Design Research
- Branding

RECENT PROJECTS

Prospr : AI Student Engagement Companion

Interaction Design / UX Research / AI Experience Design

Best Interaction Group Project, MADA Now 2026 Exhibition

Designed a student engagement tool that connects attendance, reflection, unresolved doubts, feedback, and mentor support into one continuous support journey. Created flows for AI Gem companions, post-class reflection, attendance tracking, streak insights, and mentor dashboards to help surface early disengagement signals.

Unspun : Critical Reflection Tool for News Viewers

Media Literacy / Interaction Design / Data Visualisation

Designed a student engagement tool that connects attendance, reflection, unresolved doubts, feedback, and mentor support into one continuous support journey. Created flows for AI Gem companions, post-class reflection, attendance tracking, streak insights, and mentor dashboards to help surface early disengagement signals.

Google UX Design Certificate

Online

April 2022

Design for the 21st Century with Don Norman

Online

May 2023

WORK EXPERIENCE

UX Designer

May 2022 - Feb 2024

Jio Platforms Ltd.

Navi Mumbai, India

- Brought operations, customer care, and product teams onto the same page by turning scattered requirements into clear design goals, making sure key needs were reflected in the final experience.
- Helped keep the product direction consistent in cross-team discussions, so new features felt like part of the existing experience rather than separate, disconnected additions.
- Defended design decisions that affected usability, while staying open to feedback and stronger alternatives.
- Worked with the central design team to introduce reusable patterns, supported by clear documentation and examples that reduced one-off designs and helped teams move faster.
- Delivered enterprise portals for customer care, operations, and product teams on schedule, while maintaining the quality standards agreed with stakeholders.

Happy to provide references that can speak to my work and collaboration style.
